

Nonogram

Instructions:

Each cell of the grid will be left blank or filled in. To solve a nonogram, consider the numbers at the boundaries. Each number represents a continuous block of filled in squares ordered top to bottom or left to right.

Tips:

- You're told how many cells are filled in for each block, but the puzzle doesn't tell you how far apart each block is, you will have to deduce this yourself.
- If you know a cell must be left blank then mark it with a small dot.
