

# Calcudoku

2%		1-	
3-		24x	
12x	6x		4+

## Instructions:

- This is similar to sudoku, and uses 1-4 for a 4x4 puzzle and 1-5 for a 5x5 puzzle, etc.
- Like in sudoku each row and column contains each number exactly once.
- But unlike sudoku, none of the starting numbers are provided.
- Instead you use the math hints to deduce the numbers.
- The grid is broken into groups of squares called cages.
- Each cage tells you what type of operation (+,-,x,%) and the final answer.
- For example a cage with 4+ means, the numbers in the cage add to a total of 4.
